H SAF products NRT availability requirement guaranteed to end users

Products are maintained in two separate storage areas:

- **On-line Archive:** Latest 60 days of production constantly available (24/7)
Immediate access to selected items for registered users
- **Off-line Archive:** Entire production since the beginning of H SAF operations. Items available through Order Management System, made available on demand in a FTP area for a limited temporal window

Create virtual environment for python with conda

Conda is an open source package management system and environment management system that runs on Windows, macOS and Linux. Conda quickly installs, runs and updates packages and their dependencies. It was created for Python programs, but it can package and distribute software for any language. <https://conda.io/en/latest/index.html>

➤ How to set up a virtual environment using miniconda

Mac:

```
curl https://repo.anaconda.com/miniconda/Miniconda3-4.7.10-MacOSX-x86_64.sh -o miniconda.sh
bash miniconda.sh -b -p $HOME/miniconda
export PATH="$HOME/miniconda/bin:$PATH"
conda create -n sm_env
conda install -n sm_env -c conda-forge numpy scipy pandas matplotlib rasterio geopandas netCDF4 pyflakes
statsmodels cartopy basemap basemap-data-hires cython h5py jupyter gdal python=3.6 metview pybufr-ecmwf
pykdtree pygrib pyresample
source activate sm_env
pip install --upgrade pip
pip install ascat pytesmo metview
```

Linux:

```
wget https://repo.anaconda.com/miniconda/Miniconda3-4.7.10-Linux-x86_64.sh -O miniconda.sh
bash miniconda.sh -b -p $HOME/miniconda
export PATH="$HOME/miniconda/bin:$PATH"
conda create -n sm_env
conda install -n sm_env -c conda-forge numpy scipy pandas matplotlib rasterio geopandas netCDF4 pyflakes
statsmodels cartopy basemap basemap-data-hires cython h5py jupyter gdal python=3.6 metview pybufr-ecmwf
pykdtree pygrib pyresample
source activate sm_env
pip install --upgrade pip
pip install ascat pytesmo metview
```
